

ABSTRACT

An epitaxial cleaning apparatus has a blower controller module and controller module code. The blower controller module is connected between a blower of an epitaxial deposition device having a reaction chamber, a blower and a plurality of plenum chambers for delivering cooling air from the blower to the reaction chamber, and a blower power source for controlling the speed of the blower. The controller module code for controlling the blower controller module is installed within a control module connected to the epitaxial deposition device for controlling the operation of the epitaxial deposition device
